Vision Factory Receives UR+ Software Certification – Live on UR+ Catalog

Silver Spring, Md. – Feb. 8, 2019 — Today Universal Robots (UR) launched Robotic VISION Technologies Inc.'s (RVT) cutting edge Vision Factory (VF) software suite for promotion on their UR+ certified third-party solutions catalog. This marks a major step in the adoption of Vision Factory into the collaborative robot ecosystem and the beginning of a Robot-as-a-Service model for the Company.

The addition of Vision Factory to UR+'s catalog brings 3D vision to a significant user base for the first time. With UR's reach and credibility in the industry, the message that 3D vision guidance can in fact be easy and affordable finally shows promise of being heard by small and medium enterprises with less knowledge of and access to potential solutions.

The UR+ program is the cornerstone of UR's strategy to create an all-inclusive collaborative robot ecosystem. UR aims to provide one place for customers to access any robotic solution they need by empowering end users to source and establish their own components. Similarly, RVT designed Vision Factory to be easily used, updated, and maintained by end users thus removing the expensive programmers required by many integrators. UR, recognizing that RVT's Vision Factory is a great fit for their target demographic, was pleased to recommend VF to users on their website.

RVT has a strong history of cooperation with the world's largest collaborative robot maker by market share. RVT partnered with UR to demonstrate Vision Factory guiding a UR5 at the Automation Technology Expo (ATX) in New York City in June of 2017. That same year, RVT also became a Certified Systems Integrator in which UR certified RVT to provide installation and support expertise to collaborative robot cells.

Vision Factory's presence on the UR+ store is initially being launched in North America and China where RVT has its strongest integration and distribution relationships. As RVT expands their reach globally, UR will begin recommending VF to an increasingly global user base.

About Robotic VISION Technologies Inc.

Robotic VISION Technologies Inc., a privately held machine vision software company, is a recognized leader in the field of Vision Guided Robotics (VGR™). RVT's 2D, 2.5D, and 3D vision guidance software platform allows robots to **"See, Think, Do**." RVT's software and technologies enable image recognition, machine vision, machine learning, and robot guidance processes in industrial and non-industrial markets. RVT has recently developed a 3D vision guidance system for the collaborative robot market and has been designated as a Certified System Integrator by Universal Robots. The company's main 3D vision solution was honored with the Henry Ford Technology Award as well as the BAE Chairman's Award for outstanding service. Major manufacturers using RVT's products include Ford, General Motors, Chrysler, Honda, Toyota, Nissan, Harley-Davidson, Boeing, and Johnson & Johnson. RVT's eVF™ software platform is installed in hundreds of systems worldwide and operates every day controlling over one-half billion dollars of capital equipment. RVT holds ten patents with ten more pending for its award-winning technology.
